IMPORTANT NEW INFORMATION ABOUT INJECTING OPANA ER®!

There have been cases of a blood disorder called TTP from injecting OPANA ER® reported to the FDA!

TTP is a rare disorder that can cause internal bleeding and clotting at the same time, which can result in kidney damage, stroke, brain damage or even death.

There have only been a handful of these cases reported in one area of the US and most of the cases were among women. Currently, we do not know if it is because of how the pills were injected or from something in the new formulation or another reason.

Please be safe and if you are injecting Opana ER® please be aware that there may be a serious risk.

Here is a link to the FDA’s warning about TTP and Opana ER®: http://www.fda.gov/Drugs/DrugSafety/ucm322432.htm
